

# Gentry Manor (Philippines)

## Project description

Gentry Manor is a luxurious mixed-use complex located in the bustling area of Manila’s, Tambo, Parañaque district. Located in the sprawling “Entertainment City”, this modern complex is surrounded by amenities including casinos, shopping malls, and entertainment facilities.

The architecture of Gentry Manor combines contemporary design with functional spaces, offering high-end residential units, office spaces, and retail establishments. The development features sleek, modern buildings with glass facades, providing panoramic views of Manila Bay and the surrounding urban landscape.

Residents and visitors of the building can enjoy a variety of amenities, such as swimming pools, fitness centers, gardens, and dining facilities. Gentry Manor is located near major transportation hubs, making it easily accessible from different parts of Metro Manila.

Gentry Manor is located in Tambo, Parañaque in Metropolitan Manila

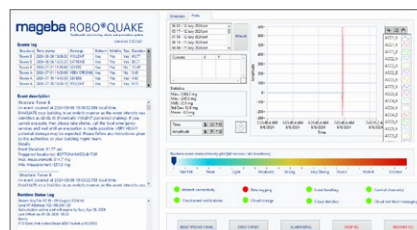

## mageba scope

The Department of Public Works and Highways (DPWH) issued a memorandum in 2015 requiring the installation of accelerographs in specific structures, particularly in high-rise buildings and critical infrastructure.

One of the leading solutions for compliance with this mandate is ROBO®QUAKE, an advanced earthquake monitoring system, which is recognized for its exceptional ability to provide real-time assessments and in-depth insights into a building’s structural behavior before, during and after seismic events. The system’s main data unit, a sophisticated assembly of hardware integrated with specialized software and algorithms, is responsible for acquiring, processing, recording, transmitting and reporting data.

With ROBO®QUAKE, engineers and building managers can ensure that their structures are not only compliant with DPWH regulations but are also equipped with the best technology available to monitor and protect their structures against earthquakes.

Presentation of the collected data from mageba’s ROBO®QUAKE system

## Highlights & facts

### mageba Products:

Type: ROBO®QUAKE Earthquake Monitoring System

Installation: 2023

### Structure:

Country: Philippines

City: Tambo Parañaque

Type: High-rise building

Completion: 2024

Owner: Megaworld Corporation
